

Pickguard and body are screened with copper foil.

Pickguard wiring:

3 position switch goes out to 1st pot - V1 volume (500k)

2nd pot - V2 middle p/u volume control (250k)

3rd pot - tone control earths highs to signal ground (250k)

Neck pickup goes to switch and signal ground

Middle pickup goes to middle pot (volume control) - not to switch

Bridge pickup coil 1 goes to switch and tone control
Bridge pickup coil 2 - goes to signal ground and tone control.

When tone control is wide open coil 2 is earthed at both ends - single coil sound.
When tone control is nudged down, the two coils work in series for humbucker sound.
